

BUI THE TRUNG

Hanoi, Vietnam

 (+84) 373 104 304

 trune.naee@gmail.com

 github.com/Trungnef

PROFESSIONAL SUMMARY

AI Engineer with hands-on experience building LLM applications, RAG systems, and document intelligence solutions. Strong foundation in computer science, NLP, machine learning, and applied research, with experience in fine-tuning, evaluation, conversational AI, and AI-powered product development. Skilled in translating research concepts into practical systems that improve real-world workflows.

EDUCATION

◆ **Vietnam Japan University (VJU) - Vietnam National University, Hanoi** 2021 - 2025

Bachelor of Computer Science and Engineering

- **GPA:** 3.61/4.00

- **Relevant Coursework:**

- + *Algorithms for Data Science.*
- + *Natural Language Processing.*
- + *Machine Learning, Deep Learning.*
- + *Statistical Methods for Data Analysis.*

PROFESSIONAL EXPERIENCE

◆ **Aimesoft, Hanoi**

Dec 2025 - Present

AI Engineer

NTTEA - Japanese Administrative Text Generation

- Built data preparation and fine-tuning workflows for Japanese administrative writing based on approximately 120 official rules.
- Fine-tuned Tsuzumi-28B to generate compliant administrative documents from bullet-point inputs and rewrite informal text into formal administrative style.
- Supported model evaluation using MT-Bench and JGLUE.

Linebot Meisei - LINE Mini App Ordering Bot

- Developed backend and product features for a LINE-based ordering bot integrated with a mini-app workflow.
- Contributed to conversational flow design, order handling logic, and AI-assisted user interaction for product ordering.

Rakuyaku - QC Check / Consistency Check Tool

- Built AI backend services for document consistency checking across one or more PDF files.
- Applied RAG to enable semantic retrieval and automated question answering over complex PDF documents.
- Designed backend logic supporting consistency verification workflows for document quality control.

RAG (QA Assist)

- Developed a RAG-based QA assistant service that manages documents, chat history, and conversational context for grounded question answering.
- Implemented context orchestration for a generative AI API-based system and improved retrieval flow for more relevant responses.

AimeDoc - Proposal Generation System

- Contributed to an internal product that generates PowerPoint proposal decks from requirement documents, specifications, and reference materials.
- Supported document ingestion, content structuring, and generation workflows to reduce manual proposal drafting effort.

◆ **DataCom Corp, Japan**

Mar 2025 - May 2025

Machine Learning Engineer

Retail Manufacturer Matching Platform

- Contributed to the development of an AI-powered platform connecting manufacturers, brands, and retailers in the CPG industry.
- Applied machine learning techniques to support real-time data analysis and insight generation.
- Built predictive analytics capabilities to help stakeholders identify trends and improve data-driven decision-making.

RESEARCH EXPERIENCE

◆ **Research on Chain-of-Thought Techniques in Large Language Models**

Feb 2025 - Jun 2025

Student Research | Vietnam Japan University, Hanoi

- Conducted a comparative study of prompting strategies including zero-shot, few-shot, Chain-of-Thought, self-consistency, and ReAct.
- Evaluated models including LLaMA, Qwen, and Gemini on traditional Vietnamese problem-solving tasks.
- Implemented evaluation workflows using the Groq platform to analyze reasoning quality and inference behavior.
- Assessed how prompting methods affect problem-solving performance in linguistically complex contexts.

◆ **Training a High-Performance Vietnamese Language Model Based on the Mamba-2 Hybrid Architecture**

Jul 2024 - Nov 2024

Student Research | Vietnam Japan University, Hanoi

- Developed a Vietnamese language model using a Mamba-hybrid architecture for efficient long-context processing.
- Extended a pre-trained Falcon Mamba 7B model to better support Vietnamese vocabulary and syntax.
- Evaluated model performance and demonstrated strong effectiveness on long-context language tasks.

PUBLICATIONS

◆ **Bridging the Reasoning Gap in Vietnamese with Small Language Models via Test-Time Scaling - FJCAI**

2026

Authors: Bui The Trung, Do Minh Duc, Nguyen Van Vinh, Bui Nguyen Quoc Trinh

- Studied reasoning limitations in Vietnamese small language models and applied test-time scaling techniques.
- Built Vi-S1K for training and Vi-Elementary-Bench for evaluation in Vietnamese mathematical reasoning.
- Showed that supervised fine-tuning substantially improved explanation quality on a 1.7B-parameter model.
- Analyzed CoT, self-consistency, and ReAct, highlighting performance-efficiency trade-offs for smaller models.

TECHNICAL SKILLS

Programming & AI	Python, Machine Learning, Deep Learning, NLP, LLM Fine-tuning, Prompt Engineering, and RAG.
Frameworks & Libraries	PyTorch, Hugging Face, and Dify.
Tools & Platforms	Git, Docker, Jupyter Notebook, and AWS.
Evaluation & Data	Model evaluation, data analysis, experiment workflows, semantic search, and document QA.

HONORS & AWARDS

Outstanding Young Face of VJU	2023
Toshiba Scholarship	2023
BIDV Scholarship	2021
Encouraging Study Scholarship	2021 - 2025

CERTIFICATIONS

IELTS - 6.5	2025
-------------	------
